QUANTA

THE CAPACITY MODEL™

TCM 3001

HUMAN PERFORMANCE PRINCIPLES

FOR THE POWER AND TELECOMMUNICATIONS INDUSTRY

SYLLABUS

COURSE DESCRIPTION

Trainees learn how the Quanta Human Performance Principles support The Capacity Model®, how to apply the learning approach to accountability, and act on events with a productive response.

The module is taken in conjunction with the STKY and the Energy Wheel module. Complete both modules within three months to gain maximum learning and retention benefits.

Intended audience: Operations management, safety professionals, supervisors who direct the work of others, and those responsible for leading job briefings.

LEARNING OUTCOMES

1.a. Explain what The Capacity Model® is.
1.b. Explain how the Quanta Human Performance Principles support The Capacity Model®.
1.c. Compare the learning and blame approaches to accountability.
1.d. Select a productive response for a given outcome.

SUGGESTED PREREQUISITES

- Understanding The Capacity Model®

COURSE MATERIALS

- Materials to be issued at the beginning of the course.

INSTRUCTIONAL METHODS

- Lecture
- Learning activities
- Knowledge check

COURSE OUTLINE

- Housekeeping
- Quanta Human Performance Principles
- Exam

METHODS OF MEASUREMENT

KNOWLEDGE—Written exam.
A = 100%–90%
B = 89%–80%
C = 79%–70%
D = 69%–60%
F = 59% and below

If a student earns less than a 70% on the exam, one retake is permitted. If they do not earn at least a 70% on the exam retake, they must retake the course.

SKILL—Completion of all activities as directed by the instructor.

BEHAVIOR—Active participation and engagement in class discussions and activities.

STUDENT-TO-INSTRUCTOR RATIO
Maximum of 24:1.

CLOCK HOURS
3 Hours

POLICIES AND EXPECTATIONS

Building a positive learning environment—Be sure to share, support your classmates, and contribute to the positive learning environment during your course. You bring incredible value to the group and to the course. Please refrain from any behavior that you know doesn't work in a classroom environment.

TCM 3001

HUMAN PERFORMANCE PRINCIPLES

FOR THE POWER AND TELECOMMUNICATIONS INDUSTRY

AGENDA

PREPARATION

- ☐ Sign-in sheet
- ☐ Pens/Pencils
- ☐ Trainee materials: Manual, exam
- ☐ **Optional for application activities:** Mini whiteboards, whiteboard markers, whiteboard erasers

SCHEDULE

HOUSEKEEPING	*15 minutes*
QUANTA HUMAN PERFORMANCE PRINCIPLES	*2 hours 15 minutes*
EXAM	*30 minutes*

Breaks are scheduled at the discretion of the instructor.

The lunch schedule is determined by the class start time and the option to complete the STKY and the Energy Wheel module in the same day.

QUANTA HUMAN PERFORMANCE PRINCIPLES
FOR THE POWER AND TELECOMMUNICATIONS INDUSTRY

EXAM

The following test items are multiple choice. Read each test item carefully and choose the correct answer.

1. What is the difference between the learning and blame approaches to accountability?
   a. Learning emphasizes personal responsibility by individuals, while blame applies to widespread company misconduct.
   b. Accountability makes sure a worker is punished; learning and blame refer to the worker's reaction to the punishment.
   c. Learning and accountability are degrees of blame, based on level of fault.
   d. Learning is forward-looking and focused on understanding context; blame is backward-looking and seeks to find fault and punish.

2. An employee was working on a 10-ft ladder, which another worker stabilized from below. The worker on the ladder accidentally dropped a tool that hit the lower worker in the face, causing serious injuries including permanent vision loss in one eye. Which of the following demonstrates holding the workers accountable, not just punishing them?
   a. Immediately fire the worker who dropped the tool.
   b. Send the entire crew home for two days without pay to think about what happened.
   c. Work with the crews to understand how they use tools and how best to secure them while working at height.
   d. Issue an official warning to the worker who dropped the tool and then require every employee at the company—including leadership—to complete a training course on ladder safety.

3. A crew was performing a critical lift when the load failed and the material dropped barely missing a worker. Choose the productive response to this event.
   a. Who was responsible for this?
   b. What is the condition of the site? Is everyone safe?
   c. Were they following procedures?
   d. What is the corrective action to take?

4. Even when using The Capacity Model®, employees must still:
   a. Work to prevent accidents.
   b. Change jobs regularly.
   c. Expect to be injured on the job, just not seriously.
   d. Work more slowly than they have in the past.

5. If workers assume that an accident or error will happen eventually, what key question should they ask themselves?
   a. How should accidents be reported?
   b. How do we convince the crew leader to change the job order?
   c. How do we keep accidents from ever happening?
   d. How are we protected when that accident happens?

6. The new view of safety focuses on _____.
   a. Why workers failed
   b. Fixing employees through punishment
   c. How a process or system failed
   d. Identifying who made an error

7. What does the black line/blue line effect illustrate?
   a. Hazards are only present when work is not executed as planned.
   b. How work is executed is different from how work is planned.
   c. Unwanted events are unavoidable when work is not executed as planned.
   d. How work is executed must always match how work was planned.

8. According to Principle 7: Learning is a Deliberate Improvement Strategy, why is it important to pay attention to the "good" or "perfect" days?
   a. Praising employees who get the job done quickly will inspire other workers to do the same.
   b. It is important to track the number of failures and successes for reporting purposes.
   c. Leaders can learn from the successes of a "perfect" day or uncover potential problems hidden from view.
   d. Only looking at the errors and mistakes has a negative impact on employee moral.

9. When leaders recognize Principle 1: People Make Mistakes, it will help them do what?
   a. Implement a set of consequences that stop people from making mistakes.
   b. Build systems and processes that will prevent all mistakes.
   c. Create training to help employees work safely.
   d. Build systems and processes with capacity to absorb errors and mistakes.

10. According to Principle 3: Context Influences Behavior, to truly learn from an incident and improve, leaders must involve the workers and _____.
    a. Ask the questions, "What failed?" and "How did our system let that happen?"
    b. Figure out what kind of training is needed to make sure this doesn't happen again.
    c. Ask the questions, "Who failed?" and "Who is responsible for the worker failing?"
    d. Talk to leadership about how to make the process better.

EXAM KEY

The following test items are multiple choice. Read each test item carefully and choose the correct answer.

1. What is the difference between the *learning* and *blame* approaches to accountability?
   a. Learning emphasizes personal responsibility by individuals, while blame applies to widespread company misconduct.
   b. Accountability makes sure a worker is punished; learning and blame refer to the worker's reaction to the punishment.
   c. Learning and accountability are degrees of blame, based on level of fault.
   d. Learning is forward-looking and focused on understanding context; blame is backward-looking and seeks to find fault and punish. (Principle 4)

2. An employee was working on a 10-ft ladder, which another worker stabilized from below. The worker on the ladder accidentally dropped a tool that hit the lower worker in the face, causing serious injuries including permanent vision loss in one eye. Which of the following demonstrates holding the workers accountable, not just punishing them?
   a. Immediately fire the worker who dropped the tool.
   b. Send the entire crew home for two days without pay to think about what happened.
   c. Work with the crews to understand how they use tools and how best to secure them while working at height. (Principle 4)
   d. Issue an official warning to the worker who dropped the tool and then require every employee at the company—including leadership—to complete a training course on ladder safety.

3. A crew was performing a critical lift when the load failed and the material dropped barely missing a worker. Choose the productive response to this event.
   a. Who was responsible for this?
   b. What is the condition of the site? Is everyone safe? (Principle 6)
   c. Were they following procedures?
   d. What is the corrective action to take?

4. Even when using The Capacity Model®, employees must still:
   a. Work to prevent accidents. (Section 1.2)
   b. Change jobs regularly.
   c. Expect to be injured on the job, just not seriously.
   d. Work more slowly than they have in the past.

5. If workers assume that an accident or error will happen eventually, what key question should they ask themselves?
   a. How should accidents be reported?
   b. How do we convince the crew leader to change the job order?
   c. How do we keep accidents from ever happening?
   d. How are we protected when that accident happens? (Section 1.2)

NLC

6. The new view of safety focuses on _____.
   a. *Why* workers failed
   b. Fixing employees *through* punishment
   c. *How* a process or system failed (Section 1.2)
   d. Identifying *who* made an error

7. What does the black line/blue line effect illustrate?
   a. Hazards are only present when work is not executed as planned.
   b. How work is executed is different from how work is planned. (Principle 5)
   c. Unwanted events are unavoidable when work is not executed as planned.
   d. How work is executed must always match how work was planned.

8. According to Principle 7: Learning is a Deliberate Improvement Strategy, why is it important to pay attention to the "good" or "perfect" days?
   a. Praising employees who get the job done quickly will inspire other workers to do the same.
   b. It is important to track the number of failures and successes for reporting purposes.
   c. Leaders can learn from the successes of a "perfect" day or uncover potential problems hidden from view. (Principle 7)
   d. Only looking at the errors and mistakes has a negative impact on employee moral.

9. When leaders recognize Principle 1: People Make Mistakes, it will help them do what?
   a. Implement a set of consequences that stop people from making mistakes.
   b. Build systems and processes that will prevent all mistakes.
   c. Create training to help employees work safely.
   d. Build systems and processes with capacity to absorb errors and mistakes. (Principle 1)

10. According to Principle 3: Context Influences Behavior, to truly learn from an incident and improve, leaders must involve the workers and _____.
    a. Ask the questions, "What failed?" and "How did our system let that happen?" (Principle 3)
    b. Figure out what kind of training is needed to make sure this doesn't happen again.
    c. Ask the questions, "Who failed?" and "Who is responsible for the worker failing?"
    d. Talk to leadership about how to make the process better.
