QUANTA

THE CAPACITY MODEL™

TCM 3004

STKY AND THE ENERGY WHEEL FOR THE POWER AND TELECOMMUNICATIONS INDUSTRY

SYLLABUS

COURSE DESCRIPTION

Trainees learn how to identify events that result from the release of energy and to identify and categorize workplace hazards. Trainees who complete the course taught by an NLC instructor will receive a certificate of completion from NLC.

The class is taken in conjunction with the Quanta Human Performance Principles module. Complete both modules within three months to gain maximum learning and retention benefits.

Intended audience: Operations management, safety professionals, supervisors who direct the work of others, and those responsible for leading job briefings.

LEARNING OUTCOMES

1.a Define a STKY control.
1.b Define a STKY event, STKY potential, STKY actual, and a STKY success.
1.c Apply the STKY Event Classification Tool to practical scenarios.
2.a Use the Energy Wheel to identify hazards associated with a task.
2.b Identify preventive and mitigative controls to prevent and reduce the consequences of unwanted events.

SUGGESTED PREREQUISITES

- Understanding The Capacity Model®

COURSE MATERIALS

- Materials to be issued at the beginning of the course.

COURSE OUTLINE

- Housekeeping
- STKY
- The Energy Wheel
- Exam

INSTRUCTIONAL METHODS

- Lecture
- Learning activities
- Knowledge check

METHODS OF MEASUREMENT

KNOWLEDGE

Written exam:
A = 100%–90%
B = 89%–80%
C = 79%–70%
D = 69%–60%
F = 59% and below

If a student earns less than a 70% on the exam, one retake is permitted. If they do not earn at least a 70% on the exam retake, they must retake the course.

SKILL

Completion of all activities as directed by the instructor.

BEHAVIOR

Active participation and engagement in class discussions and activities.

STUDENT-TO-INSTRUCTOR RATIO
Maximum of 24:1.

CLOCK HOURS
5 Hours

POLICIES AND EXPECTATIONS

Building a positive learning environment—Be sure to share, support your classmates, and contribute to the positive learning environment during your course. You bring incredible value to the group and to the course. Please refrain from any behavior that you know doesn't work in a classroom environment.

STKY AND THE ENERGY WHEEL FOR THE POWER AND TELECOMMUNICATIONS INDUSTRY

AGENDA

PREPARATION

- ☐ Sign-in sheet
- ☐ Pens/Pencils
- ☐ Trainee materials: Manual, exam, Leading STKY Discussions pocket card, STKY Discussion Guide
- ☐ **Optional for application activities:** Mini whiteboards; whiteboard markers; whiteboard erasers

SCHEDULE

HOUSEKEEPING	*15 minutes*
STKY	*1 hour, 30 minutes*
ENERGY WHEEL	*2 hours, 45 minutes*
EXAM	*30 minutes*

Breaks are scheduled at the discretion of the instructor.

The lunch schedule is determined by the class start time and the option to complete the Quanta Human Performance Principles module in the same day.

STKY AND THE ENERGY WHEEL FOR THE POWER AND TELECOMMUNICATIONS INDUSTRY

EXAM

The following test items are multiple choice. Read each test item carefully and choose the correct answer.

1. What does STKY stand for?
   a. Stop Those Killing Years
   b. Safety Training Keeps You… Alive (STKYa) or Prepared (STKYp)
   c. Stuff That Kills You
   d. Stop, Think, Know Yourself

2. To count as STKY, an energy (if released) must be life-threatening, life-altering, or:
   a. Extremely painful
   b. Unexpected
   c. Avoidable
   d. Life-ending

3. Which of the following would be a STKY event?
   a. The "check engine" light comes on while the crew is driving a work vehicle to the job site
   b. A utility pole unexpectedly rolls off a delivery truck
   c. A worker doesn't pay attention during a job briefing
   d. It begins to snow at the job site but the crew has no snow shovels

4. What type of event is a STKYp?
   a. A work incident where injury was successfully prevented thanks to controls
   b. A STKY event in which no one was seriously injured, but mitigative controls were either not in place, not functioning, or not effective
   c. A work incident that resulted in an actual injury
   d. A work incident that a crew is prepared for, thanks to safety training and situational awareness

5. What is a STKY success?
   a. A STKY event where a hazard successfully got through worker controls to cause an injury or damage equipment
   b. A work incident where safety training prompted workers to successfully install a control
   c. A STKY event where mitigative controls were in place, functioning, and effective
   d. Any event where crews do not need capacity for failure

6. What is the difference between a preventive control and a mitigative control?
   a. A preventive control helps keep an unwanted event from happening; a mitigative control reduces the consequences of the unwanted event
   b. There is no difference; these terms mean the same thing
   c. A control is preventive only if it's more protective than normal PPE
   d. A mitigative control refers to safety equipment that is close to failure (a "mitigating factor")

7. In terms of STKY-related injury, what does "life-altering" mean?
   a. Requires the worker to miss no more than one week of work
   b. Motivates a worker to quit an employer for safety reasons
   c. A state where death is imminent or probable if not immediately addressed by trained medical personnel
   d. A state of permanent or long-term impairment or loss of the use of an internal organ, bodily function, or body part

8. What is a STKY discussion?
   a. The nickname for yelling at a worker who makes a serious mistake
   b. A sit-down meeting of company leadership to verify that crews have the proper PPE for the hazards they face
   c. A conversation with a crew that focuses on identifying and controlling STKY hazards
   d. An investigation that occurs following a STKY event

9. Which of the following is an appropriate question for a STKY discussion?
   a. Is that protection enough, or do we need more?
   b. Who screwed up?
   c. How much budget do we have?
   d. What is the OSHA minimum requirement?

10. Which energy has the shoutable "Stuff that moves"?
    a. Mechanical
    b. Gravity
    c. Pressure
    d. Motion

11. What's the shoutable for biological hazards?
    a. Stuff that's living
    b. Stuff that kills you
    c. Stuff that bites and stings
    d. Stuff that's toxic

12. Digger derrick augers are hazards under which energy on the Energy Wheel?
    a. Motion
    b. Electrical
    c. Mechanical
    d. Pressure

13. Used hypodermic needles are hazards under which energy on the Energy Wheel?
    a. Mechanical
    b. Medical
    c. Chemical
    d. Biological

14. Which of the following hazards would fit under the chemical energy on the Energy Wheel?
    a. Fixing a flat tire
    b. Vehicle exhaust in an enclosed area
    c. Poison ivy
    d. Not enough drinking water on a hot day

15. Which of the following hazards would fit under the pressure energy on the Energy Wheel?
    a. Hydraulic hoses on equipment
    b. Utility pole with rotted base
    c. Jackhammer
    d. Passing traffic
